Valereum to Participate in Maxim Group's "Digital Assets 2025: To Bitcoin and Beyond," Virtual Conference

Valereum Plc, a company focused on unlocking capital and creating value in tokenised digital markets as a provider of technology solutions and marketplace operations today announces that Valereum will present at Maxim Group's "Digital Assets 2025: To Bitcoin and Beyond,"virtual conference. Nick Cowan, Chief Executive Officer, will hold a fireside chat with Maxim Group's analyst Matthew Galinko on Wednesday, February 12, 2025, at 3:30 GMT. The Company will hold virtual one-on-one meetings with investors throughout the day.

About Valereum PLC

Valereum is a fintech company seeking to unlock capital & create value in tokenised digital markets, both as a leading technology provider and as a marketplace operator.

It aims to be the global market leader in the rapidly developing tokenised digital markets sector. Our proprietary technology has the power to unlock capital and create value across all financial markets (private, real-world assets "RWA" and public) by enabling efficient, tokenised trading. How? 'The Bridge' DFMI (Digital Financial Market Infrastructure) is a world-leading turnkey full-stack technology solution that delivers T-Instant settlement at the point of trade in registered securities - effectively moving the T+1 cycle into 'right now'.

Tokenisation technology is increasingly being embraced as the future of finance by governments and large financial institutions. There is market potential to create unprecedented opportunities in both real world assets (BCG predicts the RWA market size to be between $16 and $64 trillion by 2030), and traditional public markets, currently capitalised at over $100 trillion. VLRM will exploit these opportunities through licensing its technology as a trusted DFMI and also by putting it into action through the operation of VLRM exchanges and RWA marketplaces.

VLRM's deep capital markets expertise has culminated in The Bridge solution, utilising leading technology suppliers to deliver primary and secondary trading in public and private markets at a unique price point for low-cost adoption. Frictionless 'T-Instant' trading has been made possible, by seamlessly integrating the Central Securities Depository (CSD) into the matching engine to provide settlement at the point of trade (when you trade you settle).

Far-reaching benefits of tokenisation for issuers, existing and prospective investors, and market professionals: removes the enormous inefficiencies in current public capital markets; unlocks value in illiquid or real world assets through opening up untapped new issuer pools; creates wider investment choices and flexibility to existing and currently unrepresented investor groups; enables efficient and secure storage and transmission of value; capital previously considered too complex or expensive can now be unlocked, with efficiencies which are driving adoption throughout and beyond the financial food chain.
