Widespread surface gold mineralisation at El Zorro
Channel sample grades up to 30.30g/t gold

- Initial channel sampling results from the Coquetas prospect confirms surface gold mineralisation over 750m of strike.
- Surface gold zones identified correlate well to recent high-grade drill results
- Wide zones returned include;

  - **11.00m @ 6.03g/t Au including 3.00m @ 20.95g/t Au;**
  - **123.00m @ 0.37 g/t Au including 18.00m @ 1.71 g/t Au;**
  - **19.00m @ 1.01g/t Au;**
  - **20.00m @ 0.99g/t Au;**
  - **62.00m @ 0.28g/t Au;**
  - **28.00m @ 0.67g/t Au and**
  - **35.00m @ 0.57 g/t Au.**

- Drilling and surface sampling confirm Coquetas mineralisation over 750m of strike, 300m deep and up to 100m wide.
- Multiple repetitions of gold bearing zones identified.
- Results demonstrate scale and confirm geological model for gold mineralisation at El Zorro.
- Drilling continues, 9 holes of initial 10 hole completed, assay results imminent.

Tesoro Resources Limited (Tesoro or **the Company)** is pleased to announce that it has received surface assay results for controlled outcrop channel sampling conducted at the El Zorro Gold Project (El Zorro), Chile. Results received further enhance El Zorro's potential to host a large-scale gold deposit, with known mineralised zones expanded and new zones identified which have never been drill tested.

In late 2019, prior to the Company's re-admission to the ASX, a detailed mapping and channel sampling program was undertaken over the Coquetas prospect at El Zorro, to gain a better understanding of the controls and distribution of gold mineralisation at Coquetas (Figure 1). A total of 1,057 continuous rock chip channel samples were collected from outcropping rock. Full results are presented in Appendix 1.

The results indicate a large, widespread gold bearing system with confirmed surface gold mineralisation at Coquetas occurring over a total strike length of 785m and remains open.

Tesoro Managing Director Zeff Reeves commented:

"These results further enhance El Zorro's potential to host a significant gold deposit. With the benefit of having excellent exposures of fresh rock, the Tesoro team has been able to collect detailed channel samples from across the Coquetas Prospect which have returned some excellent results. The results further support the Company's geological model, with several of the already identified mineralised zones being significantly increased in size and additional previously unknown areas of

+61 8 9322 1587 | info@tesororesources.com.au | Suite 5, 62 Ord Street, West Perth WA 6005 | www.tesororesources.com.au

gold mineralisation having been identified. We now have significant surface gold mineralisation occurring over 785m of strike, of which we have only drill tested approximately 350m. This provides considerable scope to increase the scale of the prospect."

Coquetas Channel Sampling

In late 2019, the Company undertook a detailed channel sampling program over the Coquetas prospect to provide high resolution data enabling a better understanding on the controls and distribution of gold mineralisation. The Coquetas area is characterised by extensive outcropping fresh rock where topsoil has been removed during the installation of drill access roads and drill pads. This has provided excellent geological exposure where detailed mapping and controlled, surveyed channel sampling has been completed across the Coquetas Prospect (Figure 1).

The sampling campaign collected 1,057 samples from 77 channels. Samples were continuously collected along a marked channel and handheld GPS centre point was recorded for each sample. A nominal 2kg of material was collected for each sample, which was sent to ALS Laboratories in Santiago, Chile for gold analysis.

Results of the program have shown that the Coquetas gold system is well mineralised at surface, with gold deposition controlled by the interaction of NW trending fault zones and the host El Zorro Tonalite lithology. Tesoro has now delineated gold mineralisation from surface to over 300m of depth and over a 785m strike extent at Coquetas. Mineralised zones occur as lenses along, and adjacent to the NW trending faults zones.

Higher grades are associated with the main NW structures, with gold grade generally increasing with proximity to the fault locations, as previously demonstrated by drill results. Several high-grade samples were returned from this program; a list of significant results is presented in Table 1.

Table 1 – Selected significant results from the Coquetas channel sampling program. Full results presented in Appendix 1.

The detailed information gained from the channel sampling program has shown that the main mineralised zone in central Coquetas between approximately 7,036,100mN and 7,036,450mN, to be a large single mineralised zone (Figure 1). This area was previously interpreted to consist of four mineralised lenses (using a 0.20g/t Au gold cut off). This new interpretation provides additional scope for drilling and expansion of the already drilled areas at Coquetas.

In addition, new zones of surface mineralisation have been delineated to the south and north of central Coquetas, providing further drill targets.

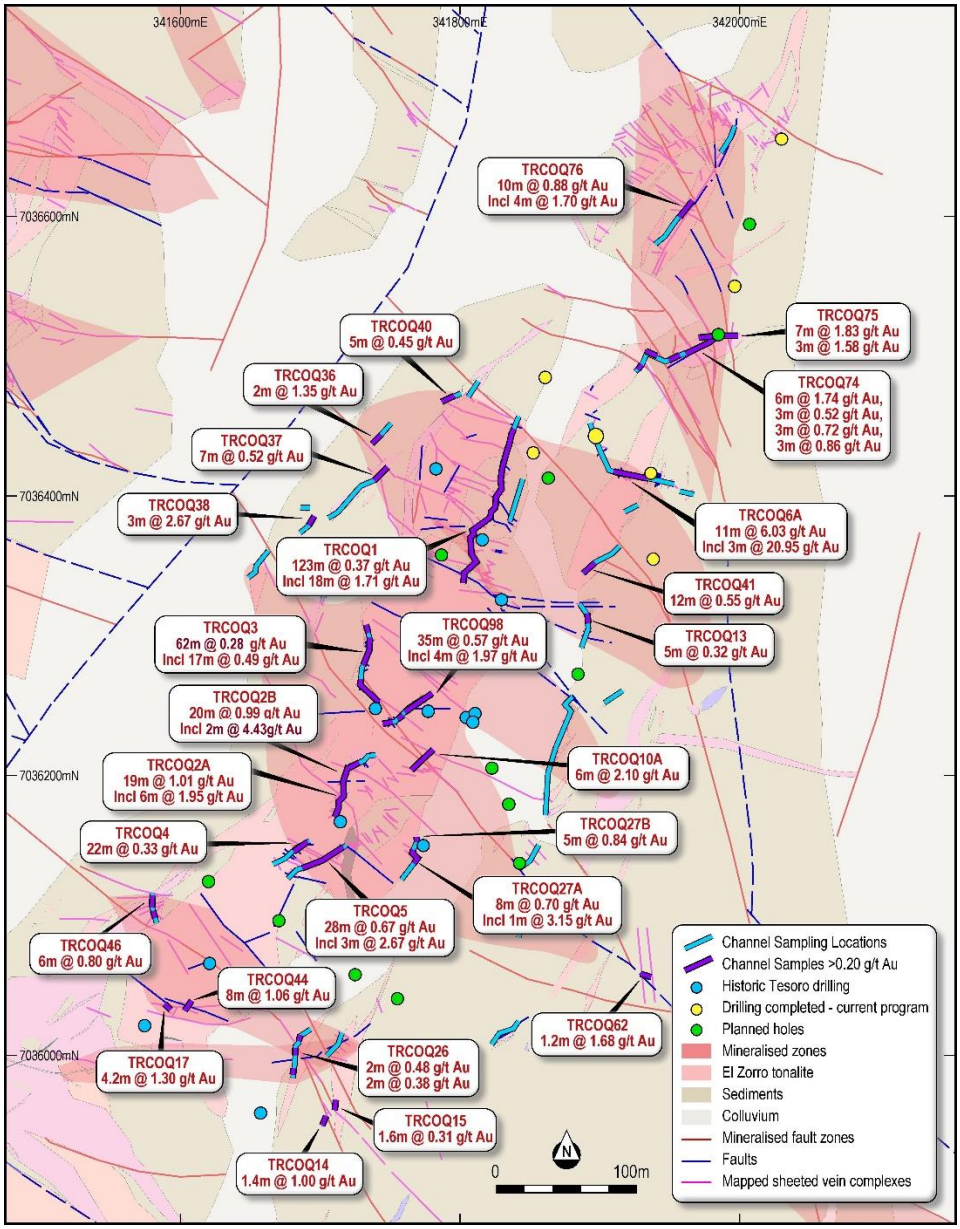

Figure 1 – Coquetas channel sampling results on interpreted geology. Note new interpretation of the Central Coquetas mineralised zone.

Next Steps

Tesoro is currently undertaking an initial 10-hole drill campaign at El Zorro with drill assay results imminent. To date the Company has completed 9 holes for 2,232 metres. The results of the detailed channel sampling campaign have provided additional information to assist future drill planning and delineation of a gold resource at Coquetas. The Company will assess all drill data in conjunction with the surface mapping and sampling data and consider further exploration drilling at Coquetas, dependent upon results.

About Tesoro

Tesoro Resources Limited was established with a strategy of acquiring, exploring and developing mining projects in the Coastal Cordillera region of Chile. The Coastal Cordillera region is host to multiple world class copper and gold mines, has well established infrastructure, service providers and an experienced mining workforce. Large areas of the Coastal Cordillera remain unexplored due to the unconsolidated nature of mining concession ownership, but Tesoro, via its in-country network and experience has been able secure rights to two district scale gold projects in-line with the Company's strategy. Tesoro has rights to acquire up to 80% of the El Zorro Gold Project and 100% of the Espina Gold Project

Competent Persons Statement

The information in this report that relates to Exploration Results is based on information compiled by Mr Zeffron Reeves (B App Sc (Hons) Applied Geology) MBA, MAIG). Mr Reeves is a member of the Australian Institute of Geoscientists and a Director and major shareholder of the Company. Mr Reeves has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Reeves consents to the inclusion in this report of the matters based on this information in the form and context in which it appears.

Future Performance

This announcement may contain certain forward-looking statements and opinion. Forward-looking statements, including projections, forecasts and estimates, are provided as a general guide only and should not be relied on as an indication or guarantee of future performance and involve known and unknown risks, uncertainties, assumptions, contingencies and other important factors, many of which are outside the control of the Company and which are subject to change without notice and could cause the actual results, performance or achievements of the Company to be materially different from the future results, performance or achievements expressed or implied by such statements. Past performance is not necessarily a guide to future performance and no representation or warranty is made as to the likelihood of achievement or reasonableness of any forward-looking statements or other forecast. Nothing contained in this announcement nor any information made available to you, is or and shall be relied upon as, a promise, representation, warranty or guarantee as to the past, present or the future performance of Tesoro.

Appendix 2 – JORC TABLES

Section 1: Sampling Techniques and Data

Criteria	JORC Code explanation	Commentary
Sampling techniques	• *Nature and quality of sampling (e.g. cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as downhole gamma sondes, or handheld XRF instruments, etc.). These examples should not be taken as limiting the broad meaning of sampling.*	Tesoro completed channel sampling. Sampling processes are considered appropriate for the style of mineralisation.
	• *Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.*	**Tesoro** completed channel sampling, Sampling processes are considered appropriate for the style of mineralisation. Channel sampling sites were painted across the sample site by Tesoro to the width of the sample. Surficial material was removed from the sample.
	• *Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done; this would be relatively simple (e.g. 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g. submarine nodules) may warrant disclosure of detailed information.*	Tesoro has completed a channel sampling program of 1057 samples. Sampling was by industry standard technique including: • location of the station using handheld GPS. • Outcrop is brushed with a hand held brush to clean off surficial debris prior to sampling. • A continuous rock chip sample is hammered off the outcrop along the painted sample line. • Samples of up to 2kg of rock are packed in plastic bags with assay-number tickets stapled to the bag.
Drilling techniques	• *Drill type (e.g. core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc.) and details (e.g. core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc.).*	No drilling has been completed in the reported results of this report.
Drill sample recovery	• *Method of recording and assessing core and chip sample recoveries and results assessed.*	No drilling has been completed in the reported results of this report.
	• *Measures taken to maximise sample recovery and ensure representative nature of the samples.*	No drilling has been completed in the reported results of this report.
	• *Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.*	No drilling has been completed in the reported results of this report.
Logging	• *Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.*	No drilling has been completed in the reported results of this report.
	• *Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc.) photography.*	No drilling has been completed in the reported results of this report.
	• *The total length and percentage of the relevant intersections logged.*	No drilling has been completed in the reported results of this report.
Subsampling techniques and	• *If core, whether cut or sawn and whether quarter, half or all core taken.*	No drilling has been completed in the reported results of this report.

Criteria	JORC Code explanation	Commentary
sample preparation	• *If non-core, whether riffled, tube sampled, rotary split, etc. and whether sampled wet or dry.*	No drilling has been completed in the reported results of this report.
	• *For all sample types, the nature, quality and appropriateness of the sample preparation technique.*	No drilling has been completed in the reported results of this report.
	• *Quality control procedures adopted for all subsampling stages to maximise representivity of samples.*	No drilling has been completed in the reported results of this report.
	• *Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling.*	No drilling has been completed in the reported results of this report.
	• *Whether sample sizes are appropriate to the grain size of the material being sampled.*	No drilling has been completed in the reported results of this report.
Quality of assay data and laboratory tests	• *The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.*	Tesoro's channel sampling program , was undertaken using a 50g fire assay technique for gold. QAQC data was monitored and reported by Cube Consulting. Reviewing the summary of results by Cube the overall survey is of reasonable quality and fit for purpose for geochemical exploration.
	• *For geophysical tools, spectrometers, handheld XRF instruments, etc., the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.*	Standard chemical analyses were used for grade determination. There was no reliance on determination of analysis by geophysical tools.
	• *Nature of quality control procedures adopted (e.g. standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e. lack of bias) and precision have been established.*	Standards and blanks have been inserted into the sample stream every 20 samples, which is deemed acceptable for a program of this nature.
Verification of sampling and assaying	• *The verification of significant intersections by either independent or alternative company personnel.*	No drilling has been completed in the reported results of this report.
	• *The use of twinned holes.*	No drilling has been completed in the reported results of this report.
	• *Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.*	Sample data is digitally entered and stored following documented sample and data handling protocols which have been reviewed by CSA Global. The protocols are considered adequate.
	• *Discuss any adjustment to assay data.*	No adjustments were made to Tesoro geochemistry
Location of data points	• *Accuracy and quality of surveys used to locate drill holes (collar and downhole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.*	Sample locations have been located using a handheld GPS
	• Specification of the grid system used.	The El Zorro Project uses the PSAD56 grid system
	• *Quality and adequacy of topographic control.*	The topography generated from a detailed topographic survey and generation of a DTM
Data spacing and distribution	• *Data spacing for reporting of Exploration Results.*	The channel sampling is collected on a nominal 1m long channel, up to a maximum of 3m. this spacing is deemed acceptable for the style of mienrlsiation.
	• *Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and*	The channel sample spacing is deemed appropriate for this stage of exploration.

Criteria	JORC Code explanation	Commentary
	Ore Reserve estimation procedure(s) and classifications applied.	
	• *Whether sample compositing has been applied.*	No compositing has been used
Orientation of data in relation to geological structure	• *Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.*	Channel samples are generally, where p[possible, sampled perpendicular to interpreted geological structures.
	• *If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.*	No drilling has been completed in the reported results of this report.
Sample security	• *The measures taken to ensure sample security.*	Chain of Custody of digital data is managed by the Company. Physical material was stored on site and, when necessary, delivered to the assay laboratory. Thereafter laboratory samples were controlled by the nominated laboratory which to date has been ALS Laboratories, Santiago. All sample collection was controlled by digital sample control file(s) and hardcopy ticket books.
Audits or reviews	• *The results of any audits or reviews of sampling techniques and data.*	No audits have been undertaken.

(Criteria in this section apply to all succeeding sections)

Section 2: Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section)

Criteria	JORC Code explanation	Commentary
Mineral tenement and land tenure status	• *Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.*	Information regarding tenure is included in the prospectus dated 30th October 2019 lodged by Plukka Ltd
	• *The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.*	The Concession is believed to be in good standing with the governing authority and there is no known impediment to operating in the area.
Exploration done by other parties	• *Acknowledgment and appraisal of exploration by other parties.*	Little historical exploration has been undertaken in either project area. Coeur d'Alene's Chilean exploration division undertook activities on the Coquetas prospect, under an option agreement with the previous owners between April 1990 and January 1993.
Geology	• *Deposit type, geological setting and style of mineralisation.*	The mineralisation model is to likely to be intrusive related gold deposit. The key characteristics that are consistent with this style deposit include: • Low sulphide content, (typically <5%); reduced ore mineral assemblage that typically comprises pyrite and lacks primary magnetite or hematite • Mineralisation occurs as sheeted vein deposits or stockwork assemblages and often combine gold with variably elevated Bi, W, As, Mo, Te, and/or Sb but low concentrations of base metals as seen in the initial four holes by Tesoro at El Zorro • Restricted and commonly weak proximal hydrothermal alteration • Intrusions of intermediate to felsic composition.
Drillhole information	• *A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drillholes:* o *easting and northing of the drillhole collar*	See prospectus dated 30th October 2019 lodged by Plukka Ltd

Criteria	JORC Code explanation	Commentary
	○ *elevation or RL (Reduced Level – elevation above sea level in metres) of the drillhole collar* ○ *dip and azimuth of the hole* ○ *downhole length and interception depth* ○ *hole length.* • *If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.*	
Data aggregation methods	• *In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (e.g. cutting of high grades) and cut-off grades are usually Material and should be stated.*	**El Zorro:** No cutting of grades has been undertaken at this early stage of exploration. Channel intercepts are calculated using a length weighted averaging method.
	• *Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.*	Along Channel length weighted average results are calculated using a 0.20g/t Au cut off and a maximum of 5m internal dilution
	• *The assumptions used for any reporting of metal equivalent values should be clearly stated.*	No metal equivalents are reported.
Relationship between mineralisation widths and intercept lengths	• *These relationships are particularly important in the reporting of Exploration Results.*	
	• *If the geometry of the mineralisation with respect to the drillhole angle is known, its nature should be reported.*	**EL Zorro:** The mineralisation forms sub-vertical sheeted veins and individual veins and may form plunging zones within the mineralised structures. Drilling and sampling by Tesoro has been undertaken to test these orientations.
	• *If it is not known and only the downhole lengths are reported, there should be a clear statement to this effect (e.g. 'downhole length, true width not known').*	**EL Zorro:** Exploration results are reported as along channel widths as the true width is not known with any certainty.
Diagrams	• *Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drillhole collar locations and appropriate sectional views.*	Relevant maps and diagrams are included in the body of the report.
Balanced reporting	• *Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.*	All assay results from sampling are reported.
Other substantive exploration data	• *Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.*	All material exploration data is reported in the body of the report.
Further work	• *The nature and scale of planned further work (e.g. tests for lateral extensions or depth extensions or large-scale step-out drilling).*	**El Zorro**: Further work will be focused on drill testing the Coquetas mineralisation and additional prospects as defined in the work program. Core will be used for metallurgical testwork and resource modelling is planned.
	• *Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.*	Diagrams have been included in the body of this report.
