About Potash West

Potash West (ASX:PWN) is an exploration company focused on developing phosphate and potassium-rich greensand deposits in Western Australia's Dandaragan Trough. The Company aims to define a substantial resource base and investigate how best to recover phosphate and potash from the mineral. The project is well situated in relation to infrastructure, with close access to rail, power and gas. A successful commercial outcome will allow the Company to become a major contributor to the fertiliser market at a time of heightened demand.

The Company has a major land holding over one of the world's largest known glauconite deposits, with exploration licenses and applications covering an area of more than 2,600 km^2. Previous exploration indicates glauconite sediments are widespread for more than 150km along strike and 30km in width.

The Company has a 55% interest in 450 km2 of potash exploration licences in a historical potash producing region, the South Harz field in Thuringia, Central Germany. The field has been a potash producer for over 100 years.
