Aurrigo International plc
("Aurrigo" or the "Company")

Aurrigo receives £4.5m multi-year advanced engineering framework agreement for Automotive Division
Supplying innovative electrical systems for a vehicle OEM's next-gen supercar programme

Aurrigo International plc (AIM: AURR) is pleased to announce a new three-year £4.5m framework agreement to supply new, innovative high performance electrical system sets for a next generation supercar programme. Under the terms of the agreement, £0.81m of contracted orders will be recognised in FY26, with the remainder due to be placed across FY27 and FY28 in line with the customer's production schedule.

This record contract with a long-standing customer reflects the strength of Aurrigo's R&D and engineering capability in high tech electrical systems and integration, and its track record of delivering complex, high-value programmes to demanding quality and timing requirements, in both advanced automotive and autonomous engineering.

Strategically, the award supports the Group's continued growth objectives across high-performance automotive and autonomous vehicle sectors, with Automotive strengthening and complementing the engineering, integration, validation and programme delivery capability of the Autonomous division. It also reinforces Aurrigo's reputation for precision engineering, reliability and innovation in complex, highly-regulated and safety critical environments.

Prof. David Keene MBE, CEO of Aurrigo International, commented: *"This contract is further proof of our world-class engineering and delivery capability. Our Automotive team is the innovation engine behind our autonomy capabilities, with a vertically integrated R&D function where advances in hardware, software, and AI are engineered into real-world autonomous systems, turning complex programmes into deployments built to exacting standards.*

That same discipline and technical depth feeds directly into our Autonomous division as we scale autonomy into demanding, safety-critical environments. We continue to see a strong pipeline for the Autonomous division supported by high engagement from a number of blue-chip parties and positive progress across ongoing testing programmes."

Notes to Editors:

Aurrigo International plc (AURR LN) is a UK based developer and producer of autonomy software, fully autonomous vehicles and mobile robotics platforms. Aurrigo's first application is autonomous airport Ground Support Equipment (GSE) designed to move cargo, baggage and people between terminals, baggage halls and airside next to aircraft. Thus, transforming operations that are manually intensive improving safety, operational efficiencies and meeting sustainability targets, while navigating growing passenger volumes, rising costs and increasing labour shortages.

Aurrigo's autonomy software and controls, designed to operate in safety, security sensitive and harsh environments, have an opportunity to transform airside logistics and bring autonomy to wider markets.

Headquartered in Coventry, UK with offices in Singapore, Cincinnati and Ottawa, the Group has a 33-year heritage designing and supplying automotive vehicle OEM's with highly advanced, innovative product and system solutions.
