ASX ANNOUNCEMENT
Big Red Drilling Update

18th November 2014

Rumble Resources Ltd ("Rumble" or "the Company") is pleased to provide an update of the Company's RC/Diamond drill program at the 100% owned Big Red Project in the Fraser Range, Western Australia.

Rumbles maiden drilling programme in the Fraser Range commenced on schedule at its Big Red Project. The company is utilising a high powered Sandvick multipurpose RC/Diamond truck mounted rig, top of the line for power, accuracy and has 2500m NQ depth capacity.

The current program is of 4 holes of RC/Diamond drilling 1600m. The programme is designed to test a large EM conductor within the interpreted Voisey Bay feeder Structure – **See Figure 1**.

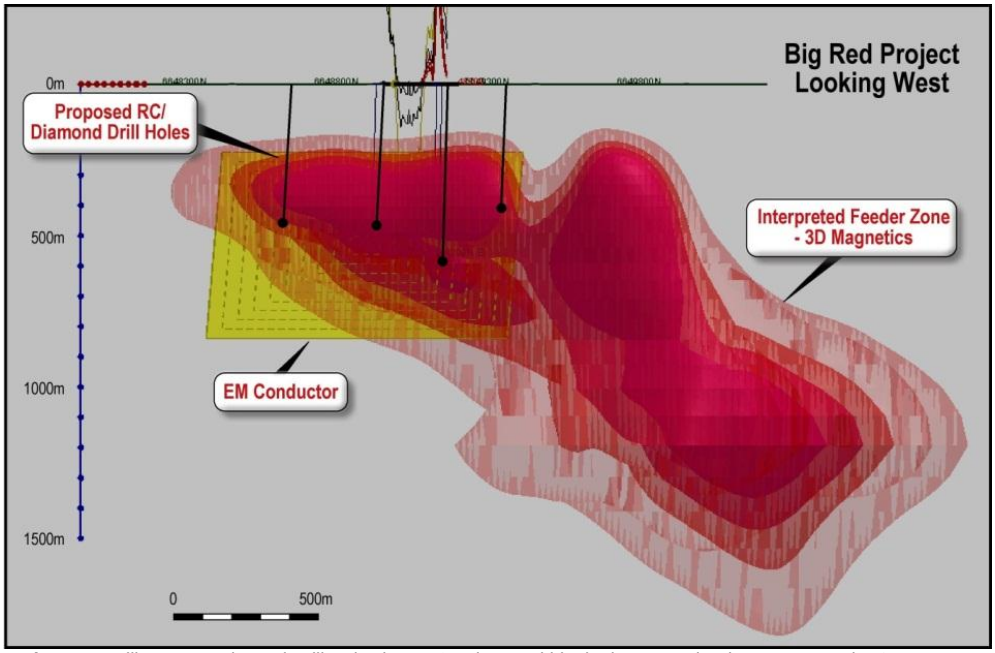

Figure 1: Drill Target – Planned Drill Holes in EM Conductor within the interpreted Voiseys Bay Feeder Structure

The first hole was drilled with an RC pre-collar to approximately 95m with the initial hole encountering difficult drilling conditions. The drilling was switched over to mud rotary which continued to a depth of 175m. Diamond drilling then commenced and proceeded without incident to 240m where again difficult drilling conditions were encountered within a highly sheared mafic gneiss. This hole unfortunately had to be abandoned short of the target depth and as such the conductor remains to be tested.

A second hole has commenced adjacent to the first hole utilising mud rotary precollar from surface with diamond drilling to follow.

Following the completion of the program a down-hole EM survey will be scheduled to provide a diagnostic test of further bedrock conductors.

Shane Sikora
CEO

- ENDS –
