SEPTEMBER 2024 – QUARTERLY REPORT

HIGHLIGHTS

Strong Quarterly Operating Revenue of $4.04m

Transition to profitability.

Near Record Cash Conversion of $4.91m

Solid cash conversion.

Significant Brine Technology Breakthrough

Bolsters tech portfolio.

Progressing Brine Opportunities with Global Energy Co

Treating CSG brines.

Lithium Brine Activities with Global Mining Co

Critical minerals project.

Identification of Strategic Master Plan Project Sites

Executed multiple MOUs.

Operations

- Strong quarterly operating performance with focus on core strategic growth and profitability.
- Continued growth with maiden revenues from major energy, mining and industrial clients.
- Developing project pipeline expected to further underpin long-term sustainable growth.

Technology

- Significant brine technology breakthrough with applications for CSG and other key industries.
- Range of strategic developments in support of key Master Plan related CSG opportunities.
- Successfully completed first phase of technology study for tier-1 global mining client.

Corporate

- Progress in implementing enhanced go-to-market strategy to achieve Master Plan objectives.
- Advancing specific upstream and downstream projects at key strategic project locations.
- Implementation of initiatives to establish Parkway as provider of integrated solutions.

Parkway Corporate Limited ("**Parkway**" or the "**Company**") (ASX: PWN) is pleased to report its activities for the quarter ending 30 September 2024.

Background

Parkway is a leading Australian water & wastewater treatment and process technology company. Parkway is focused on the commercialisation of a portfolio of innovative process technologies in key industrial markets, as Parkway believes this is an important and effective strategy for addressing various global water related sustainability challenges.

In recent years, Parkway has made significant investments in groundbreaking research and development (R&D) related activities, including in the acquisition, development, validation and optimisation of a comprehensive portfolio of cutting-edge industrial water treatment related process technologies.

In support of Parkway's accelerated technology commercialisation strategy, Parkway primarily operates through two strategically integrated capacities:

- **Industrial Operations** business division is focused on the provision of conventional water and wastewater treatment related products & services, incorporating fabrication as well as project delivery related services including installation, for a broad range of predominantly commercial, municipal and industrial clients.
- **Industrial Technology** business division is primarily focused on innovative process technology related R&D, including process screening, evaluation, optimisation and piloting, as well as a range of technology commercialisation related activities.

As the Industrial Operations division continues to grow and build critical mass, it is increasingly important in providing Parkway with a suitable platform to commercialise its portfolio of proprietary process technologies, being developed by the Industrial Technology division.

Integrated Water Treatment Capabilities

Parkway has assembled a fully integrated inhouse project delivery capability, including for the innovative process technologies being developed and commercialised by Parkway.

As a result of these integrated water treatment related capabilities, Parkway is increasingly capable of delivering a diverse range of industrial water, wastewater treatment and infrastructure related projects on a turnkey (engineering, procurement & construction – EPC and design & construct – D&C) basis.

Further details about the integrated water treatment solutions, including turnkey water infrastructure related solutions provided by Parkway, is outlined at:

https://pwnps.com/collections/integrated-water-treatment-solutions

INDUSTRIAL OPERATIONS DIVISION

Industrial Operations are performed through Parkway Process Solutions (PPS) and predominantly focused on the provision of conventional water and wastewater treatment related products and services, including specialty fabrication services. In addition, PPS is increasingly involved in integrated project delivery related services including installation services for a diverse range of commercial, municipal and industrial clients.

Operating Performance

During the quarter, PPS generated strong group revenues of $4.04 million, underpinned by a strong contribution from recently acquired Tankweld Group. The robust operating performance was reinforced by strong cash conversion, with record cash receipts from customers for the quarter of $4.91 million.

Project Delivery Capabilities

As the Industrial Operations of Parkway continue to grow, Parkway is increasingly involved in the design, fabrication and installation of complex water and wastewater treatment related infrastructure. As outlined above, building these project delivery capabilities, is an important aspect of Parkway's broader priorities in providing integrated industrial water treatment solutions, including solutions incorporating PPT technologies.

During the ordinary course of operations, Parkway collaborates closely with leading industrial companies including in energy, mining and major engineering contractors as well as municipal water authorities, to provide a range of water infrastructure related engineered solutions. In many instances, Parkway is one of only a small number of suitably experienced service providers capable of providing the specialised solutions for critical water related infrastructure, in key markets.

A recent example from during the reporting period, involved Parkway assisting a client develop a solution which required the supply of multiple mobile diesel pump sets (*figure 1a*) to be used for mine site water management at a critical minerals project in Northern Australia. Parkway also routinely provides a range of specialised fabrication and installation services (*figures 1b-1d*) to support the operations of key water infrastructure for major water utilities, particularly in South-Eastern Australia.

Figure 1: Recent Examples of Parkway Industrial Operations – Project Delivery Related Activities

1a: Mobile mine dewatering pump-sets. **1b:** Fabricate & install. **1c:** Water Utility construct. **1d:** Mechanical install. **1d:** Fabricate & install.

Specialty Product Offering

In addition to project delivery, the supply of specialised industrial water treatment related products is an important component of Parkway's go-to-market strategy. Whilst Parkway already represents a large number of leading global original equipment manufacturers (OEMs), Parkway has recently been invited to upgrade its established relationship with the world's largest pump manufacturer to a more prominent channel partner status, highlighting the growing significance of PPS in key markets.

Business Development & Growth Outlook

Parkway continues to improve its market penetration through PPS, by securing new business from a diverse range of clients, for the provision of industrial water and wastewater treatment related products, services, and solutions. PPS continues to grow its client base, which includes large mining and energy companies, a diverse range of industrial companies, as well as engineering services, government, and municipal clients, amongst others. The growing PPS client base, together with the established Tankweld client base, provides a strong foundation and supports future sales growth as these commercial relationships continue to grow and mature.

The growth outlook for the Industrial Operations division of Parkway remains very encouraging, as Parkway has a significant project backlog as well as a substantial pipeline of project opportunities, particularly in Victoria where water authorities are investing $15 billion in water related infrastructure over the next 5 years. As a nominated delivery partner, Parkway is well placed to capture opportunities.

INDUSTRIAL TECHNOLOGY DIVISION

Industrial Technology related activities are performed through Parkway Process Technologies (PPT) and predominantly focused on innovative process technology related R&D, including process screening, evaluation and piloting, as well as a range of commercialisation related activities.

Technology Development

By leveraging the process engineering capabilities of Parkway, PPT continues to build a portfolio of proprietary technologies, capable of providing highly integrated process solutions, for a range of complex wastewater and process streams traditionally considered difficult to treat. PPT has developed innovative applications for these technologies, including applications resulting in improvements in the processing and treatment of challenging industrial wastewater streams, particularly for large scale industrial, oil & gas, mining and mineral processing operations.

Parkway Centre for Brine Technologies (PCBT)

As a leading developer of innovative industrial brine processing technologies, Parkway has provided a range of process technology development related services (process simulation, experimentation, piloting and related studies) to a diverse range of third parties.

To assist in the rapid industrialisation of Parkway's R&D related activities and accelerate the commercialisation of PPT technologies, including Master Plan related opportunities, earlier this year, Parkway established the Parkway Centre for Brine Technologies (PCBT).

The PCBT provides Parkway with the following key capabilities:

- Experimental and bench scale testing and evaluations including analytical capabilities.
- Pilot scale testing and demonstration to support commercialisation activities.
- Development, integration and testing of modularised systems incorporating PPT technologies.

PPT Technology Priorities

The development and commercialisation of a portfolio of proprietary process technologies remains an important priority for Parkway, with a range of ongoing activities focused on realising the substantial advantages of the PPT technology portfolio.

During the reporting period, the core emphasis in terms of technology development, was focused on two separate but interrelated technology packages:

- Upstream brine pre-treatment, concentration & beneficiation, and the subsequent treatment of these processed brines with;
- Downstream process technologies including electrochemical technologies.

Although these respective technology portfolios are being advanced in the context of coal seam gas (CSG) related opportunities, these technologies have broader applications, which Parkway is also concurrently pursuing, particularly given Parkway's growing project delivery capabilities.

PPT Upstream Brine Processing

The upstream brine pre-treatment, concentration and beneficiation technologies being commercialised by Parkway through a series of highly innovative process flowsheets, incorporate a combination of conventional processes (provided through PPS) as well as proprietary process technologies developed by PPT, including but not limited to aMES® and iBC®.

The upstream process technology packages developed by PPT have undergone extensive process development, bench-scale piloting, large-scale piloting and various engineering studies to confirm key technoeconomic parameters necessary for commercial scale adoption.

In addition to enabling subsequent downstream processing, the adoption of PPT's upstream process technologies provide a cost-effective brine dewatering/concentration option for industry as well as assist in the reduction of costs associated with building and maintaining regulated waste brine storage ponds.

PPT Downstream Electrochemical Technology

As part of Parkway's objective of improving the salt balance for upstream CSG projects, PPT has been evaluating novel integration pathways for various innovative downstream process technologies for sequestering intermediate brine and salt streams into industrial chemicals. The production of industrial chemicals from these processed brine streams is an important pathway for achieving improved environmental outcomes and provides an opportunity for significant additional value creation.

In recent months CSG derived brine samples that have undergone upstream brine processing have been further processed through a proprietary downstream flowsheet, incorporating pilot scale electrochemical salt splitting technology. Following a series of optimisation studies, these highly innovative piloting activities successfully converted waste salt products into caustic soda, as well as hydrochloric acid. Parkway believes these successful piloting results represent the first production of a mineral acid from an Australian waste brine resource.

The proprietary downstream flowsheet has significant potential applications for Parkway's Master Plan related objectives, with the production of hydrochloric acid and caustic soda presenting significant opportunities for both the CSG industry, as well as for mining and downstream mineral processing and refining industries.

Further details about the downstream electrochemical salt-splitting technology were outlined in the ASX announcement[1] released by Parkway on 04 September 2024.

Technology Commercialisation – Queensland Coal Seam Gas Industry

Since the large-scale development of the CSG industry in Queensland in 2010 and the corresponding establishment and subsequent transition to the export of liquified natural gas (LNG) commencing in 2015, the CSG industry has been a significant part of the Queensland economy. In addition to supplying a significant proportion of East Coast gas production, according to estimates from Australian Energy Producers[2], in FY24 the Queensland CSG industry generated $22.4 billion in LNG export revenue and $2.4 billion in local and state government revenues, highlighting the scale of the industry. The recently elected LNP Queensland Government is understood to be supportive of the growth of the CSG industry.

Waste Brine Related Challenges

Notwithstanding the significant scale and importance of the Queensland CSG industry, over the life of currently operating CSG projects in Queensland, an estimated 6 million tonnes of waste salts are forecast to be produced by these projects. A significant proportion of these salts have already been produced, in the form of waste brine and are currently being stored in regulated waste brine storage ponds, awaiting a viable long-term disposal solution. The disposal of waste brine and salts, as contemplated by the CSG industry, present extensive environmental risks and challenges, and remains deeply unpopular, with significant opposition from a range of stakeholders.

Recognising these significant challenges, in recent years, Parkway has systematically developed a portfolio of proprietary process technologies (as outlined above), to specifically address the waste brine and salt management and disposal related challenges facing the CSG industry. These technologies have undergone extensive process optimisation, piloting and technoeconomic evaluations, providing a high level of confidence in the value proposition presented by these technologies, particularly in comparison to the industry's proposed approach of sophisticated salt disposal (salt encapsulation).

Importantly, the encapsulation of waste salts from the CSG industry remains unproven, is inconsistent with the long-established regulatory (waste management hierarchy) and policy framework and no disposal plans and/or facilities have been permitted in Australia, highlighting the enduring waste management related challenges facing the industry.

[1] Refer to 04 September 2024 ASX announcement, available at Parkway Investor Hub: https://pwn.investorhub.com/announcements/6512081.

[2] Australian Energy Producers, Queensland's natural gas: A plan for energy and economic security. Published by AEP in October 2024.

QBS Master Plan

As part of a long-term strategy to address the significant CSG derived waste brine and salt challenges in Queensland, on 22 June 2023, Parkway released[3] a Master Plan, an innovative, sustainability driven concept based on providing an industry-wide solution. Parkway's CSG brine processing and commercialisation related activities in Queensland are being conducted through Queensland Brine Solutions Pty Ltd (QBS), a wholly owned subsidiary of Parkway.

The primary objective of the QBS Master Plan is to utilise the proprietary process technologies developed by Parkway, to convert CSG derived waste brine and salts produced in Queensland, into valuable industrial chemical products. This proposed approach is intended to improve the sustainability of the Queensland CSG industry, by addressing major community concerns and by providing a permanent waste "disposal" (convert waste-to-products) solution.

Advanced Large-Scale Downstream Opportunity

As previously disclosed, Parkway has performed a range of studies based on PPT technologies, including a comprehensive feasibility study for a major CSG company with whom Parkway has been collaborating for several years. Earlier this year, Parkway finalised a pre-FEED related and other technical studies for this leading CSG company (a global energy company), to further advance the brine processing project/s proposed by Parkway.

Whilst specific details about these activities and discussions remain commercial in confidence, the parties are exploring broader Master Plan related objectives, including the prospect of building a beneficial brine processing facility or potentially multiple facilities. Further updates and details regarding the next steps for this opportunity are anticipated in the near-term.

Enhanced Go-To-Market Strategy

Consistent with the published objectives of the QBS Master Plan and in parallel with the *Advanced Large-Scale Downstream Opportunity* outlined above, Parkway has been progressing an enhanced go-to-market (GTM) strategy for providing integrated solutions for the Queensland CSG industry.

Following a series of internal evaluations including extensive scenario analysis and technoeconomic evaluations, as well as feedback from industry, Parkway has developed an even more efficient and effective pathway for providing an industry-wide solution to the waste brine and salt related challenges facing the Queensland CSG industry. Importantly, the enhanced GTM strategy provides a defined roadmap for a permanent solution to the enormous waste brine and salt challenges impacting the CSG industry, based on the best available technology (BAT) being commercialised by Parkway.

The enhanced GTM strategy consists of the following key components:

- (Depending on the specific CSG project, may involve), Upstream client site pre-treatment and stage 1 concentration of brine, which is then transported to the;
- QBS Central Upstream Plant, where regional upstream brines are consolidated, undergo stage 2 concentration & beneficiation, and then (the now much smaller volume) is transported to the;
- QBS Downstream Hub, where the brine and/or salts are converted into valuable industrial chemicals, in a strategically located plant in proximity to key industrial chemical markets.

Preliminary details about the enhanced GTM strategy are outlined below, with further details expected to be outlined during the Group Managing Director & CEO presentation, at the Parkway 2024 Annual General Meeting scheduled for 27 November 2024.

QBS Central Upstream Plant

As part of plans to provide a viable long-term solution for the CSG industry in Queensland, Parkway is developing standardised process plant designs incorporating modular equipment, based on Parkway's proprietary upstream process technologies. Internal evaluations confirm Parkway is likely to be able to provide a highly attractive and permanent liquid waste disposal service to the CSG industry, where no

[3] Refer to 22 June 2023 ASX announcement, available at Parkway Investor Hub: https://investorhub.pwnps.com/announcements/4372527.

other alternatives currently exist, and unlikely to be available in the foreseeable future.

Prior QBS upstream plans were predominantly premised on substantial onsite processing, before two separate concentrates would need to be transported to centralised hubs. Due to several recent process innovations and optimisations, the type of upstream plant proposed for upstream CSG client sites has been significantly simplified, providing a range of operational advantages, as well as improved financial performance.

The indicative upstream brine concentration process and key metrics are summarised as follows:

- The initial starting brine concentration (stage 1) at the upstream CSG client site will be concentrated by approximately 3-4x, to produce a stage 2 brine, which is much cleaner and more amenable to further processing.
- This stage 2 brine will then be consolidated (transported) to the QBS Central Upstream Plant, where the brine will be processed and concentrated a further 2-3x, producing a highly concentrated (stage 3) brine stream that is approximately 10% of the starting volume, highlighting the extent of volume reduction.

As part of the enhanced GTM strategy, Parkway has identified several strategically located project sites in the immediate vicinity of the *Advanced Large Scale Downstream Opportunity*, which would provide QBS with the opportunity to establish a QBS Central Upstream Plant, to consolidate, concentrate & beneficiate regional CSG brines at a central location.

The proposed QBS Central Upstream Plant is currently expected to have a nominal nameplate capacity sufficient to process up to half of the waste brine generated by the Queensland CSG industry. Whilst there is scope to increase the capacity of the proposed QBS Central Upstream Plant, the implied transport distances for the remaining brines are likely to require a separate central upstream plant, more proximal to the remaining, but less pressing, waste brines.

Parkway has recently signed several MOUs, including with entities that own project sites suitable for hosting the proposed QBS Central Upstream Plant and is in the process of exploring options to secure an option for a long-term lease that would support the development of the QBS Central Upstream Plant.

QBS Upstream Project Delivery Capabilities

As part of Parkway's growing project delivery experience, Parkway is increasingly capable of designing, fabricating and installing the appropriate process plant, equipment and associated infrastructure, required for upstream industrial brine processing, including as part of the proposed QBS Central Upstream Plant.

Beyond the specific scope of projects envisaged by the enhanced GTM strategy, Parkway's improved project delivery related capabilities are also supporting ongoing discussions with a range of stakeholders regarding progress towards various other Master Plan related objectives.

QBS Downstream Hub

The proposed QBS Downstream Hub is intended to convert all of the brine and/or salts from the QBS Central Upstream Plant/s, into a range of valuable industrial chemicals, including hydrochloric acid and caustic soda.

Concurrently with the proposed QBS Central Upstream Plant outlined above, Parkway has also identified a strategically located downstream project site, within an established industrial precinct in Central Queensland. Parkway recently entered into an MOU with an industrial-scale project developer in relation to the potential co-location of the proposed QBS Downstream Hub on the developer's existing project site. The potential co-location opportunity provides several significant project development related synergies in relation to shared infrastructure, accelerated permitting as well as a wide range of operational synergies and other strategic benefits.

The MOU outlines a roadmap for advancing the co-location opportunity, including the preparation of a range of joint studies due for completion before the end of 2024. These studies include preliminary process plant designs, site layouts, non-process infrastructure related planning, permitting related matters as well as a range commercial considerations, which are intended to facilitate the further collaboration of the parties, in relation to the co-location of the proposed QBS Downstream Hub.

The proposed QBS Downstream Hub project site is in the vicinity of key target markets for the industrial chemicals planned to be produced by the downstream plant, providing a range of operational, logistical and commercial advantages. Whilst the first stage of the proposed QBS Downstream Hub is currently expected to have a nominal nameplate capacity sufficient to process 25% of the waste brine and salts generated by the Queensland CSG industry – the master plan being developed by QBS envisages, a four-stage development, sufficient to ultimately treat all of the waste brine and salts generated by the Queensland CSG industry, including all the legacy brines currently being stored in regulated waste brine ponds.

QBS Partners & Funding

Parkway expects that in time, the innovative process technologies developed by Parkway, will become BAT for treating CSG derived brines, in Queensland. As the owner of these innovative process technologies, to ensure appropriate alignment of strategic interests, appropriate value capture and the efficient roll-out of suitable industry-wide solutions, Parkway is well placed to lead the development of key Master Plan related activities, including as part of the enhanced GTM strategy.

As outlined above, Parkway is progressing a range of pre-development related activities, which are required to establish QBS as the proponent of this critical infrastructure, which is expected to enable QBS to attract additional strategic partners, including strategic investors.

Given the highly strategic nature of the proposed QBS Central Upstream Plant and the QBS Downstream HUB to key industry participants, Parkway expects to be able to sell down equity in either QBS and/or at the project specific SPV level, to fund development costs. Additional funding routes have also been identified, which include prepayments for either the liquid waste management services to be provided by QBS and/or for industrial chemical sales, as well as a range of other options, including capital markets and government support.

Parkway is also in discussions with other key stakeholders, including potential OEM and EPCM partners which could assist with project delivery, as well as several major including global companies that could ultimately acquire an equity interest in either the QBS Central Upstream Plant or the QBS Downstream Hub.

Technology Commercialisation – Mining Industry

In parallel with the research and development activities relating to the portfolio of innovative process technologies, Parkway is also focused on the commercialisation of PPT's more advanced proprietary flowsheets, with applications in the mining industry.

Applications in the Mining & Minerals Industry

Potential applications for the proprietary process technologies developed by PPT include, but are not limited to, the treatment of a range of complex industrial wastewater streams including brines, as well as acid and metalliferous drainage (AMD). Parkway is collaborating with various parties, in relation to several mining and downstream processing related opportunities, involving the production of critical minerals, as well as the potential treatment of complex wastewater streams, through proprietary process technologies developed by PPT.

Technology Evaluation – Global Mining Company

During the reporting period, Parkway assisted a major global mining company evaluate the feasibility of adopting a predominantly aMES® based flowsheet, to increase water and potentially mineral recovery from a high-profile lithium brine project, which is constrained by the availability of water. Subsequent to the reporting period, Parkway finalised performance of the initial project scope and is in the advanced stages of planning a range of further evaluations including piloting related activities, involving brine sourced from the international mining project. Subsequent evaluations are subject to formal project award, however, given substantial brine samples from the mining project have already been supplied by the client to the Parkway Centre for Brine Technologies, Parkway is hopeful of both project award and achieving strong results.

CORPORATE

Operating Revenue

Parkway generated group operating revenues of approximately $4.04 million for the September quarter (FY25-Q1), compared to $1.29 million for the prior corresponding period (FY24-Q1), representing a 213% increase.

Outlook

Given the significant growth in revenues generated during the reporting period and the encouraging activities outlined in the *Business Development & Growth Outlook* section outlined above; Parkway expects to continue to achieve improved operating results into the future. Notwithstanding the confidence in ongoing revenue growth, given the invariable volatility impacting various project specific activities, particularly in terms of timing impacts, at this stage the Company does not provide any form of guidance or financial forecasts. As Parkway transitions towards sustained profitability, the Company intends to commence providing guidance at the appropriate time.

Finance

EBITDA

Based on operating revenues of $4.04 million and an increased focus on profitability, Parkway generated $0.19 million in EBITDA in the September quarter (FY25-Q1), a favourable movement compared to the prior corresponding period (-$0.40 million in FY24-Q1).

Cash Flow

The strong cash conversion trend continued during the reporting period, with cash receipts from customers reaching $4.91 million (FY25-Q1), similar to the record $4.94 million in cash receipts during the prior quarter (FY24-Q4), a favourable movement compared to the prior corresponding period ($1.29 million in FY24-Q1).

Parkway experienced net cash flow of -$0.65 million during the quarter, due to $0.15 million being used in operating activities, $0.31 million in investing activities (inclusive of capitalised R&D) and $0.19 million in financing activities, inclusive of Tankweld vehicle hire purchase loan repayments. Further details are outlined in item 1.9, item 2.6 and item 3.10 of the attached *Appendix 5B*, respectively.

Although these results are unaudited, and therefore subject to change, this performance represents a significant improvement as a result of continued growth towards achieving sustained group profitability in the near-term.

As of 30 September 2024, the company held $2.84 million in cash reserves. It should be noted that the reported cash balance excludes, i) undrawn balance of the term loan facility, ii) undrawn grant funds, iii) the anticipated R&D rebate of $0.67 million for FY24, and iii) other receivables.

R&D Rebate

As a technology focused company, Parkway continues to invest in a range of commercially oriented, industrial research and development related initiatives through the Industrial Technology business division. As a result of these ongoing activities, Parkway is eligible for certain, Australian Government research and development tax incentive (R&DTI) related reimbursements.

Parkway has recently finalised its R&DTI submission for FY24 and is expecting to receive a reimbursement of $0.67 million for the corresponding period, in the next few weeks.

Inventory

The supply of specialised industrial water and wastewater treatment related products continues to be an important component of Parkway's go-to-market strategy for the Industrial Operations division operation by PPS. On this basis, PPS carries significant product inventory (stock on hand) across its various operations in Melbourne, Darwin and Perth, with the estimated value of inventory across the group at the end of the period being $1.82 million ($1.66 million in FY24-Q1).

Investor Relations

The Parkway management team have been focused on the core business including both the Industrial Technology and Industrial Operations divisions, as well as finalising the integration of Tankweld, therefore no major investor relations related activities, were conducted during the reporting period.

Subsequent to the reporting period, an investor webinar was conducted by Group Managing Director & CEO, with further details outlined in the *Activities Subsequent to the Reporting Period* section of this report.

Other Items

During the quarter $0.36 million was incurred in relation to staff costs, $0.53 million in administration and corporate costs and $4.06 million for payments to suppliers including accumulated inventory.

Additional details are provided in the attached *Appendix 5B*.

Payments to Related Parties

As outlined in the attached *Appendix 5B* (*section 6.1*), during the quarter $0.19 million in payments were made to related parties and their associates for director and key management personnel salaries, consultancy fees, superannuation, and other related costs.

Activities Subsequent to Reporting Period

MOU for QBS Downstream Hub

Parkway recently entered into an MOU with an industrial-scale project developer in relation to the potential co-location of the proposed QBS Downstream Hub on the developer's existing project site. The potential co-location opportunity provides several significant project development related synergies in relation to shared infrastructure, accelerated permitting as well as a wide range of operational synergies and other strategic benefits.

Additional details on the implications of this MOU are outlined in the *Technology Commercialisation – Queensland Coal Seam Gas Industry* section of this report.

Engagement with Potential Strategic Partners

In support of QBS Master Plan related objectives, including the enhanced GTM strategy, Parkway is exploring collaborative opportunities with a range of stakeholders including potential strategic partners.

Ongoing discussions include potential OEM and EPCM partners which could assist with project delivery, potential chemical offtakers, as well as several major including global companies that could ultimately acquire an equity interest in either the QBS Central Upstream Plant/s and/or the QBS Downstream Hub.

Newly Elected Queensland Government

The newly elected LNP Queensland Government is understood to be supportive of CSG development and has indicated that the gas sector will form a key component of future energy policy in Queensland. The forecast growth of CSG production in Queensland will invariably continue to increase the scale of waste brine and salt challenges and provide further opportunities for Parkway to provide high-value sustainable solutions, consistent with the objectives of the QBS Master Plan.

Investor Engagement

On 16 October 2024, Parkway Group Managing Director & CEO Bahay Ozcakmak, participated in a live investor webinar with Strawman.com. The webinar provided an introduction to Parkway, an overview of recent achievements, details relating to the enhanced GTM strategy, as well as an outline of opportunities being pursued by Parkway. The webinar is available at the Investor Newsroom[4] section of the Parkway website, as well as at the Parkway InvestorHub.

Upcoming 2024 Annual General Meeting

On 25 October 2024, the Company released the Notice of Annual General Meeting (AGM) with the accompanying explanatory memorandum, which provides details of the matters to the considered at the 2024 AGM, which will be held virtually via Automic Registry's platform on Wednesday 27 November 2024 at 10:00am (AEDT).

Appointment of Joint Company Secretary

On 25 October 2024, Parkway announced that current CFO Mike Hodgkinson was also appointed Joint Company Secretary. The Company's existing Company Secretary, Amanda Wilton-Heald, will continue to provide Company secretarial services to the Company, in her capacity as a Joint Company Secretary, supported by Mike Hodgkinson.

ABOUT PARKWAY CORPORATE LIMITED

Parkway Corporate Limited is an Australian cleantech company focused on developing and implementing, industrial-scale innovative water treatment solutions. Parkway is listed on the Australian Securities Exchange (ASX: PWN) and is emerging as an innovative player in water related sustainability solutions. With significant inhouse technical expertise and established partnerships, Parkway is well-placed to deliver the next generation of wastewater treatment plants, incorporating the company's portfolio of world-class technologies.

Parkway operates through four (4) core business units, comprising:

- Parkway Process Solutions (PPS) – Parkway's primary operating division and a provider of industrial water treatment products, services, solutions and associated technology to customers throughout Australia. PPS has established commercial relationships with key water industry participants, including globally recognised OEMs;
    - Tankweld Group – is an established engineering solutions provider acquired by Parkway in March 2024. Tankweld operates through two subsidiaries, Tankweld Engineering and Tankweld Installations.
- Parkway Process Technologies (PPT) – Parkway's technology development, acquisition, and commercialisation division. PPT owns a portfolio of industrial wastewater treatment technologies, including the patented aMES® and iBC® process technologies. PPT has global aspirations and is supported by a network of strategic partners, including global engineering company Worley;
- Queensland Brine Solutions (QBS) – is a recently established commercialisation entity, focused on advancing the objectives of Master Plan, a plan developed by Parkway to address the significant coal seam gas derived waste brine and salt challenges in Queensland, through the adoption of proprietary process technologies, developed by Parkway; and
- Parkway Ventures (PV) – holds a portfolio of project equity interests, including interests relating to Parkway's Karinga Lakes Potash Project in the Northern Territory of Australia.

Additional information regarding Parkway, including an overview of the corporate structure of Parkway and the companies in its corporate group, can be found at: www.pwnps.com

FORWARD-LOOKING STATEMENTS

This announcement may contain certain "forward-looking statements". The words "continue", "expect", "forecast", "potential" and other similar expressions are intended to identify "forward-looking statements". Indications of (and any guidance on) future earnings, financial position, capex requirements and performance are also "forward-looking statements", as are statements regarding internal management estimates and assessments of market outlook.

Where Parkway expresses or implies an expectation or belief as to future events or results, such expectation or belief is expressed in good faith and believed to have a reasonable basis. However, "forward-looking statements" are not guarantees of future performance and involve known and unknown risks, uncertainties and other factors, many of which are beyond the control of Parkway, its officers, employees, agents and advisors, that may cause actual results to differ materially from those expressed or implied in such statements. There can be no assurance that actual outcomes will not differ materially from these statements. There are usually differences between forecast and actual results, because events and actual circumstances frequently do not occur as forecast and their differences may be material.

Parkway does not undertake any obligation to publicly release any revisions to any "forward-looking statements" to reflect events or circumstances after the date of this announcement, or to reflect the occurrence of unanticipated events, except as may be required under the applicable securities laws.

8.5	Unused finance facilities available at quarter end (item 7.5)	3,000
8.6	Total available funding (item 8.4 + item 8.5)	**5,840**
8.7	**Estimated quarters of funding available (item 8.6 divided by item 8.3)**	38.6

Note: if the entity has reported positive relevant outgoings (i.e. a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.

8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:

8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?

Answer:

8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?

Answer:

8.8.3	Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?
Answer:	

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.

2 This statement gives a true and fair view of the matters disclosed.

Date: 30 October 2024

Authorised by: By the board
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.

2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.

3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.

4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".

5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
