4 September 2025

Winter Olympics Order and International Sports Medicine Validation

Key Highlights

- **Major Olympic Order**: HITIQ to supply 100 PROTEQT™ instrumented mouthguards for athlete safety monitoring at the Winter Olympics.
- **Elite Validation**: Success in Olympic trials highlights PROTEQT™'s comfort, usability, and advanced analytics.
- **Independent Assessment**: PROTEQT™ is being evaluated by the International Federation of Sports Medicine (FIMS) for validation and implementation in high-risk sports.
- **Expert Leadership**: Programs led by Professor Yannis Pitsiladis, IOC Medical and Scientific Commission Member, Chair of the Scientific Commission of FIMS, and Chair of the European Federation of Sports Medicine.
- **Global Momentum**: Growing recognition of PROTEQT™ as a concussion and head/neck protection solution across elite markets.

Winter Olympics Programme

Following a successful trial, **HITIQ Limited (ASX: HIQ)** (**HITIQ** or the **Company**) HITIQ has secured an order for 100 PROTEQT™ units to support athlete safety monitoring at the Winter Olympics. The system was selected for its comfort, intuitive design, ease of use, and advanced analytics capabilities, which deliver precise head impact data to support physiological assessments and proactive safety measures.

This two-year Winter Olympics agreement provides important validation of PROTEQT™'s capabilities at the elite level. The programme is led by Professor Yannis Pitsiladis, an internationally recognised sports

scientist and member of the International Olympic Committee's Medical and Scientific Commission, who will integrate the technology into comprehensive monitoring protocols to enhance athlete wellbeing. In addition to concussion detection, the system will be used to support protection of the head and neck during high-risk and extreme winter sports disciplines.

International Federation of Sports Medicine (FIMS) Assessment

PROTEQT™is currently being independently assessed by the International Federation of Sports Medicine (FIMS), the world's leading organisation for sports medicine, representing over 120 national federations and 30,000 medical professionals globally. FIMS is evaluating the system for validation and potential implementation in high-risk sports, including contact, winter, and extreme sports disciplines. This independent assessment highlights PROTEQT™'s potential as a standardised athlete safety solution across elite and community sport worldwide.

Leadership Commentary

Earl Eddings, Executive Chair, HITIQ:

"These achievements mark an important step for HITIQ. Securing 100 units for the Winter Olympics validates our technology at the highest level of competition. With the ongoing FIMS assessment, we are seeing adoption and recognition across multiple levels of competition."

Professor Yannis Pitsiladis, IOC Medical and Scientific Commission Member, Chair of the Scientific Commission of FIMS, and Chair of the European Federation of Sports Medicine:

"The PROTEQT™ system represents an important advancement in athlete safety. Real-time head impact data integrates effectively with our assessment protocols, enabling more sensitive monitoring and timely interventions to protect athlete wellbeing. Importantly, its application extends beyond concussion management to also support protection of the head and neck in extreme sports environments. Its deployment at the Winter Olympics and assessment by the International Federation of Sports Medicine (FIMS) demonstrates its potential for broader adoption in high-risk sports globally."

Strategic Impact

The combination of Olympic adoption and independent FIMS evaluation represents a significant commercial milestone for HITIQ. Production capacity is being scaled with a view to supporting growing global demand across elite sports markets.
