ASX Release
10 October 2025

DecidrOS Beta Launch Commences

Decidr AI Industries Ltd (ASX: DAI) ("Decidr" or the "Company") advises that it has commenced the Beta rollout of DecidrOS, its integrated Agentic Operating System.

Highlights:

- Rollout commenced October 7, 2025, reflecting an important milestone
- Initially targeting B2B organisations seeking to automate and coordinate intelligent workflows across sales, finance, HR, and operations
- DecidrOS provides a schema-driven platform designed to unify data, workflows and tools, validating DAI platform performance across use cases.
- Encouraging early interest, evidenced by global registrations across 17 unique sectors and 37 sub sectors.
- Initial Beta intake closed, working collaboratively to commence onboarding throughout remainder of Q2 FY26

Commenting on the rollout, David Brudenell, Executive Chairman & Co-CEO of Decidr said:

"We were encouraged by the level of interest in DecidrOS and by the quality of applicants who share our vision for building a more intelligent and connected way of working, This Beta phase marks an important milestone in the commercial delivery of our platform strategy and provides an opportunity to work closely with early adopters as we refine and scale the DecidrOS ecosystem."

DecidrOS rollout commences

DecidrOS provides a schema-driven platform designed to unify business data, workflows, and software tools through multi-app orchestration. The Beta program will help validate the platform's performance across a range of use cases and operating environments. Customers from Decidr's partnership with Amazon Web Services ("AWS") will also be included in this Beta program.

Following the Company's Beta announcement found at www.decidr.ai/product, demand from early applicants has exceeded expectations. To ensure delivery quality and platform stability, the Company has now closed applications and will proceed with onboarding for a selected cohort of businesses.

Beta Intake Criteria

The Company applied a structured selection process for the initial Beta cohort, focused on four main criteria:

- **Cross-network applicability** – Preference was given to businesses offering high-frequency B2B services (e.g., accounting, procurement, merchandising) that can benefit from repeatable, high-utility Agentic flows.

- **B2B operating model** – Organisations with clearly defined executive functions suited to agentic application across common software environments.

- **Integration readiness** – Businesses with existing system APIs and datasets that support rapid deployment and measurable automation.

- **Scalability** – Potential for each participant to grow meaningfully within the DecidrOS schema and contribute to the broader Agentic Network.

Next Steps

With Beta intake now closed, Decidr will commence onboarding selected businesses into DecidrOS throughout the quarter. This initial cohort will play a foundational role in validating core agentic workflows, shaping schema development, and demonstrating early commercial application across key verticals. These learnings will inform broader network deployment and guide the next wave of platform-led growth.

- Onboarding of eligible Beta participants has commenced and will continue through Q2 FY26.
- Businesses not selected for the first intake will be included in the OSBeta communications program, which will provide access to product updates, implementation case studies, and future onboarding schedules. Registration for this program can be found at www.decidr.ai
- Additional documentation, product walkthroughs, and platform results will be released publicly as milestones are reached.

The Company will provide further updates to the market as the rollout progresses.

-Ends-
