The Elizabeth Hill Project

Elizabeth Hill is one of Australia's high-grade silver projects and has a proven production history outlined below:

- **High grades enabled low processing tonnes:** 1.2Moz of silver was produced from just 16,830t of ore at a head grade of 2,194g/t (70.5 oz/t Ag)[1].
- **Previous mining operation ceased in 2000:** because of low silver prices (US$5)[2].
- **Simplistic historical processing technique: native silver** was recovered via **low-cost** gravity separation techniques.
- **Untapped potential remains** in ground with deposit open at depth and recent consolidation of land package offers potential to discover more Elizabeth Hill style deposits.
- **Tier 1 Mining Jurisdiction located on a mining lease** with potential processing option at the nearby Radio Hill site.

West Coast Silver has consolidated a contiguous 180km² package surrounding the historic Elizabeth Hill silver mine, with significant exploration and growth potential both near-mine and regionally. West Coast Silver's considerable tenure encompasses a significant portion of the Munni Munni fault system, as well as other fault systems subparallel to the Munni Munni fault system, which are considered prospective for Elizabeth Hill look-a-like silver deposits.
