ASX RELEASE | CLEARVUE TECHNOLOGIES LIMITED
(ASX: CPV | OTCQX: CVUEF)

CPV Appointed for Public Project in Singapore

ClearVue receives a letter of award (LOA) for the supply of solar cladding to a large-scale government project through a Singapore-based façade contractor for a sub-contract valued at between S$500,000 and S$750,000.

16 November 2026 – **Perth, Australia** – Smart building materials company **ClearVue Technologies Limited (ASX: CPV | OTCQX: CVUEF) (ClearVue** or **the Company)** has received a letter of award (LOA) for a sub-contract valued at between S$500,000 and S$750,000 (approximately A$573,000 to A$859,000) subject to final scope from an established Singapore-based façade contractor for a government-owned building in Singapore.

CONTRACT SCOPE AND DELIVERY

ClearVue's solar building products will cover approximately 4,000 m² of the façade. Each panel is a laminated glass unit structurally designed and finished in grey with matching aluminium edge framing. The system is designed to achieve a façade capacity of approximately 670 kWp, contributing to the building's overall annual renewable energy target.

Significantly, this project is for solar cladding to be deployed with a sealed face, precisely the type of deployment the ClearVue Thermal Bridge Junction Box was designed for. The technology will ensure that even in the equatorial environment in Singapore, the panels' electronics will stay cool and dry within the cavity of the façade.

The LOA represents an important milestone for ClearVue, demonstrating the readiness and suitability of its advanced photovoltaic (PV) technologies for integration into the Singapore building industry, as well as the strength of its engineering and manufacturing capabilities.

ClearVue's products have undergone testing against internationally recognised standards, including IEC 61730, IEC 61215, IEC 62790 and EN 13501-1, addressing key requirements for PV module safety, reliability, performance and fire classification applicable to the project under Singapore Civil Defence Force (SCDF) requirements.

ESTABLISHED INTERNATIONAL FAÇADE CONTRACTOR

The contractor forms part of a group employing approximately 500 people across Singapore, Malaysia and Shanghai, China. The group operates manufacturing facilities in Singapore and Malaysia and has extensive experience delivering commercial and institutional building façades.

The contracting entity holds Singapore Building and Construction Authority (BCA) Grade L6 registration for curtain wall works. This is the highest grade within that category, with no tender-value ceiling. The contractor also holds a General Builder Class 1 licence.

The group's capabilities span façade design and engineering, fabrication, assembly, glazing and installation.

ClearVue Managing Director and CEO Doug Hunt said:

"This is a major win for ClearVue in Asia and strong commercial validation of our technology. Being selected to supply a government project in Singapore is a significant achievement, not just for this project, but for the business we have spent years building. This investment of time and resources will soon show even greater returns with engagement on many projects in the region.

The importance goes well beyond the value of this project in revenue. We are taking Australian-developed technology into international government infrastructure. That is a substantial commercial milestone and strengthens our credibility as we pursue major projects across Asia and around the world.

This will be a very aesthetically appealing installation proving our technology can make solar disappear on a building while being no harder to maintain than normal glass building materials. It is also notable that ClearVue will manufacture bespoke framing for the project. This proves our ability to manufacture the entire solution on a customised basis for each deployment as we are doing for the balustrade and skylight framing systems on the Canva project.

This also illustrates Singapore's commitment to its carbon reduction goals and moreover is an example of Asia driving the adoption of new technologies to reduce emissions."

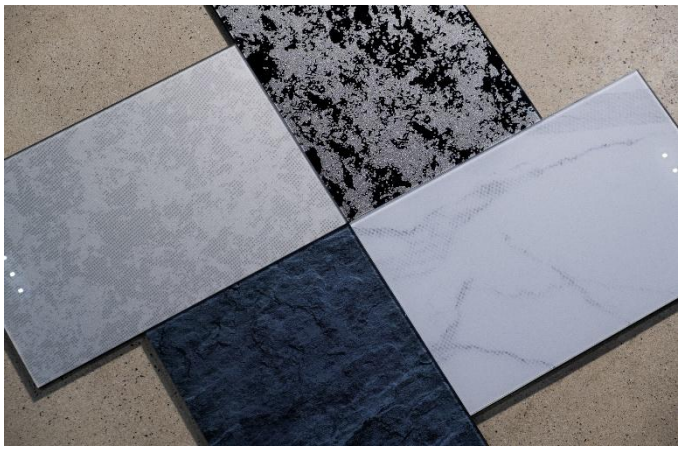

COMMERCIAL CONFIDENTIALITY AND DISCLOSURE

ClearVue is unable to name the contractor or the specific project due to commercial confidentiality requirements. ClearVue's contracting customer is the façade contractor, rather than the Singapore Government.

Having regard to ASX Compliance Update 02/25, the Company does not consider the identity of the contractor to be information that would have a material effect on the price or value of its securities. The Company considers that the customer description and commercial information disclosed are sufficient for investors to assess the contractor's standing and creditworthiness.

The Company confirms that it has disclosed all information that is material to assessing the impact of the contract on ClearVue, and that this announcement is not misleading by omission.

Solar Cladding

Authorised by the Board of ClearVue Technologies Limited.

ABOUT CLEARVUE TECHNOLOGIES LIMITED

ClearVue Technologies Limited (ASX: CPV | OTCQX: CVUEF) is an Australian technology company that integrates solar technology into building façade and rooftop surfaces to provide renewable energy generation and offset the operational carbon footprint of buildings. The Company's advanced, patented glass technology preserves glass transparency maintaining building aesthetics while generating energy.

ClearVue has extended solar energy generation to vision glass, cladding, spandrel, balustrade, and skylight solutions. These solutions can offset operational energy requirements, significantly contributing to net zero buildings.

ClearVue's integrated solar façade is revolutionising the way buildings are designed, constructed, and renovated. Experience how building façades will become a major contributing factor to reducing operational carbon by visiting ClearVue at www.clearvuepv.com.

FORWARD LOOKING STATEMENTS

Statements contained in this release, particularly those regarding possible or assumed future performance, revenue, costs, dividends, production levels or rates, prices, or potential growth of ClearVue Technologies Limited, are, or may be, forward-looking statements. Such statements relate to future events and expectations and, as such, involve known and unknown risks and uncertainties. Actual results and developments may differ materially from those expressed or implied by these forward-looking statements depending on a variety of factors.

APPENDIX A – KEY TERMS

Scope of Agreement:	Manufacture of panels, manufacture of framing system, framing of panels and shipping framed units to site.
Conditions:	The award is subject to project design approvals and final approvals of manufacturing plan. Final contract value will reflect quantities supplied and delivered.
Commercial Conditions:	A) **Deposit:** 10% – payable upon formation of the Contract. B) **Drawing Acceptance:** 40% – payable upon the Customer's written acceptance of the final Shop Drawings and engineering drawings. C) **Shipment:** 40% - payable prior to or upon shipment of the Goods. D) **Delivery & Inspection:** 10% – payable following delivery and the Customer's written acceptance of the Goods post-inspection.
Project Delivery Timelines:	Approximately 240 days.
Total Contract Value:	A$573,000 to A$859,000 subject to final design and scope.
