ClearVue Unveils Augenium as New Global Trading Brand

The new brand reflects the Company's expanded capabilities across renewable energy, advanced building materials and engineering.

Friday 27th November 2026 - **Perth, Australia -** Smart building materials company **ClearVue Technologies Limited (ASX: CPV | OTCQX: CVUEF)** (**ClearVue** or **the Company**) is pleased to announce that it will trade under the new business name Augenium (aw-JEE-nee-um) from Friday 27th November 2026.

The introduction of Augenium reflects the Company's evolution beyond transparent solar glass into a broader portfolio of advanced building materials, renewable energy technologies and engineered solutions, while addressing practical brand protection challenges associated with its expanding international operations.

As part of the transition, the Company's Australian operating subsidiary has changed its name from ClearVue International Pty Ltd to Augenium Pty Ltd.

ClearVue Technologies Limited remains the ASX-listed parent company. The registered company name, ACN and ASX and OTCQX trading codes remain unchanged.

EXPANDED CAPABILITIES

What began as a vision to generate renewable energy through transparent glass has evolved into a much broader opportunity.

Through years of research, development and collaboration with international industry partners, the Company has recognised that the potential of its technology extends well beyond windows to the broader building envelope.

Traditionally passive building surfaces, including façades, cladding, balustrades, skylights and rooftops, can become productive assets, generating renewable energy while contributing to thermal performance and building efficiency.

Recent advances in electronics, solar cell design, integration with leading glass coatings and thermal insulation technologies have further expanded the Company's capabilities and the applications for its products.

The result is a growing portfolio of advanced building materials and engineered solutions designed to integrate renewable energy generation into the buildings themselves.

BUILDING A GLOBAL BUSINESS

ClearVue's international footprint has expanded significantly, supported by projects, strategic partnerships, licensing agreements and industry relationships across Australia, Asia, Europe, North America, Africa and the Middle East.

As the Company's international operations have developed, it has become increasingly important to establish a consistent and distinctive identity across global markets. A number of businesses already operate under the same or similar names in international markets, including businesses in closely related sectors such as glass, glazing and building materials. These existing uses have created challenges in securing consistent international trademark protection, relevant country-specific domains and a distinct global digital identity.

The implications extend beyond brand recognition. They present practical challenges for international marketing, customer identification and the Company's ability to establish and protect a consistent identity as it expands into new jurisdictions.

While the ClearVue name has played an important role in establishing the Company's technology and market presence, its international growth requires a brand that can support the next stage of commercial development.

Augenium has been developed as a distinctive identity that is not tied to any single product or application, providing a foundation for a consistent global brand as the Company's operations, technology and product portfolio continue to expand.

The Company has lodged a trademark application for the Augenium name.

INTRODUCING AUGENIUM AND AURE

The name **Augenium** draws on two ideas: *aura*, suggesting energy and light, and *ingenium*, the Latin root associated with engineering and ingenuity. The opening letters "Au" also acknowledge the Company's Australian origins.

Together, these ideas are captured in the Company's new tagline, **"Build with Energy"**, reflecting its vision of transforming traditional building materials into active, energy saving and energy-generating components in the built environment.

The Company's portfolio of advanced building materials will be marketed under the new product brand **AURE**.

AURE combines "AU" from Augenium with "RE" for renewable energy, creating a consistent identity across the Company's expanding product range.

This approach establishes a clear global brand structure, with Augenium representing the business and AURE providing a unified product identity for architects, developers, engineers, specifiers and industry partners.

COMMERCIAL MOMENTUM

The introduction of Augenium comes at a time of growing international commercial activity.

The Company's technologies have recently been selected for Canva's new headquarters in Sydney and the Rio Business Centre redevelopment in Cyprus.

ClearVue has also been awarded a contract to supply its technology for a Singapore Government building project, representing an important milestone in its growing presence in the region.

The Company's products are already installed and operating internationally, including solar skylights at the World Bank's administration building in Abuja, Nigeria, and solar cladding at 100 St Georges Terrace in Perth.

These projects, together with the Company's expanding global network of licensing, strategic and consulting partners, demonstrate the increasing range of applications and markets for the technology.

The transition to Augenium is intended to build on that momentum, providing a consistent international identity as the Company continues to pursue commercial opportunities across its expanding product portfolio.

Chief Executive Officer & Managing Director Doug Hunt said:

"Augenium reflects the business we have become and, importantly, the global business we are building.

We began with an innovative concept to generate renewable energy through transparent glass. Through years of research, development and engineering, we have built something much broader — a growing portfolio of advanced building materials and technologies capable of transforming the way buildings generate and manage energy.

Over the past year, we have strengthened our leadership, expanded our technical capabilities and established strategic relationships across international markets. We are now seeing that progress translate into real projects and growing commercial opportunities.

We are building a global technology business, not simply an Australian company selling into overseas markets. To do that successfully, we need a brand we can own, protect and establish consistently across our international operations.

Augenium gives us that foundation. It reflects how far the Company has progressed, while AURE provides a unified identity for the technologies and products we are taking to market.

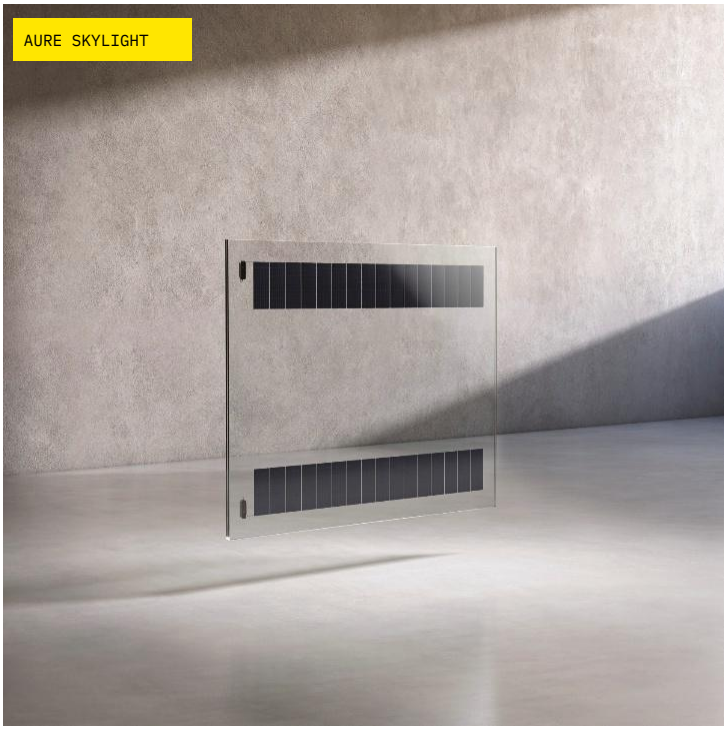

Our focus remains firmly on commercial execution, delivering projects, expanding our international presence and building long-term shareholder value."

ABOUT CLEARVUE TECHNOLOGIES LIMITED

ClearVue Technologies Limited (ASX: CPV; OTCQX: CVUEF) is an Australian technology company that integrates solar technology into building façade and rooftop surfaces to provide renewable energy generation and offset the operational carbon footprint of buildings. The Company's advanced, patented glass technology preserves glass transparency maintaining building aesthetics while generating energy.

ClearVue has extended solar energy-generation to vision glass, cladding, spandrel, balustrade, and skylight solutions. These solutions can offset operational energy requirements significantly contributing to the net zero building.

ClearVue's integrated solar façade is revolutionising the way buildings are designed, constructed, and renovated. Experience how building façades will become a major contributing factor to reducing operational carbon by visiting ClearVue at www.clearvuepv.com.
