Notes to Editors

About Fulcrum Metals PLC

Fulcrum Metals PLC (AIM: FMET) is an AIM-listed, technology-led natural resources company focused on the recovery of precious and critical metals from legacy mine waste in Canada using innovative cyanide-free technologies developed by Extrakt Process Solutions LLC and its associates (together, "Extrakt"). In addition to advancing its mine waste recovery strategy, the Company maintains a portfolio of highly prospective mineral exploration and development projects in Ontario and Saskatchewan, Canada.

Fulcrum has an agreement for exclusive rights in respect of any licensed use of Extrakt's proven cyanide free technology on legacy gold mine waste sites across the Timmins and Kirkland Lake mining districts. These are two of Canada's largest historic gold camps with a historical production exceeding 110 million ounces of gold over the past 100 years, leaving more than 70 documented legacy mine waste sites.

The Company's initial focus is the advancement of the Teck-Hughes and Sylvanite projects towards commercial production. Fulcrum is pursuing a scalable mine waste recovery strategy and is evaluating potential sites for the deployment of a standalone pilot facility, intended to support both its own projects and the evaluation of third-party mine waste opportunities. The Company expects to advance its strategy through a combination of technical development, strategic partnerships and flexible project financing solutions.

Fulcrum believes this strategy provides a substantial long-term opportunity to unlock significant and largely untapped value from legacy mine waste while supporting responsible resource recovery and the regeneration of historic mine sites. The combination of exclusive rights across two of Canada's most prolific gold districts and a deployable processing platform provides a foundation for establishing a broader and scalable mine waste recovery business.
